AI-Assisted Developer

I build and ship web applications with an AI-assisted workflow: I write the requirements, direct AI tooling, and personally review, test, and own every line that ships. Computer Technology graduate with production experience on a biometric attendance system and a portfolio of deployed, documented projects.

Experience

IT and Administrative Support Intern

July 2025 – July 2026 · 1,800 hours

Avega Bros. Integrated Shipping Corp.

- Provided technical and administrative support: troubleshooting, hardware and software installation, data entry, inventory records and document organisation.
- Contributed to BITS, the company's biometric attendance system, in production use.

Backend & Attendance Engine Developer (OJT Team of 8)

2026

BITS — Biometric Integrated Timekeeping System

- Worked in an AI-assisted workflow: wrote requirements and acceptance criteria, directed AI tooling, and personally reviewed, tested, and owned every merged change.
- Built biometric overtime check-in handling so additional daily scans route to approved overtime requests instead of overwriting a shift checkout.
- Fixed multi-shift and split-shift edge cases producing phantom no-shift records.
- Normalised punch times and emitted real-time dashboard events.
- Added batch overtime assignment and split-shift report aggregation.

Selected Projects

ArcaneTyper — Multiplayer Typing Game (AI-ASSISTED BUILD)

arcane-typer.vercel.app (<https://arcane-typer.vercel.app>)

- Wrote requirements and directed the AI-assisted build of a web typing game with survival, practice, and real-time duel modes, plus leaderboards, achievements, and user accounts.
- Manually tested game modes, scoring, and real-time duel flows, and tracked bugs and enhancements using GitHub Issues.

Mimic — Android Party Game with Private Encrypted Vault (AI-ASSISTED

BUILD)

github.com/lbemCabahug/mimic (<https://github.com/lbemCabahug/mimic>).

- Planned requirements and directed the AI-assisted build of an Android social-deduction game (3 game modes, 5 word packs, LAN multiplayer for up to 8 players) that conceals a private encrypted photo, video, and notes vault.
- Manually tested game and vault security flows, including secret-gesture unlock, PIN setup, failed-PIN lockout, and encrypted video playback.
- Found and reported release-only bugs — including a vault setup failure that appeared only on clean installs — and adopted a rule to test every release build on a wiped physical device.
- Verified features against an automated suite of 450+ tests plus manual checks on a physical release-mode device before marking work done.

Skills

AI-Assisted Development: Full project lifecycle: requirements & acceptance criteria, AI direction (Antigravity IDE), code review, manual testing, and Git/GitHub deployment — I own every line that ships.

Web: TypeScript, JavaScript, SQL, HTML, CSS, React, Next.js, Astro, Express.js, Tailwind CSS

Data: PostgreSQL

Mobile: Android (AI-assisted build and release testing)

Tooling & Workflow: Git, GitHub, VS Code, Antigravity IDE, GitHub Issues & Kanban Boards, Agile/Kanban, debugging, technical problem-solving

Support & Records: Technical support, Data entry and records

Education

Bachelor of Industrial Technology, Major in Computer Technology

Cebu Technological University – Danao Campus

August 2022 – May 2026

- Academic Distinction Awardee
- Dean's Lister

Training

Creative Web Design

TESDA — 102 hours

Languages

- **Cebuano** — Native
- **Filipino** — Fluent
- **English** — Professional working proficiency
