Junior QA Tester

Target roles: Junior QA Tester, Manual QA Tester

Entry-level QA candidate with 1,800 hours of internship experience testing a production biometric attendance system: writing and executing test cases, performing manual pre-release testing, and reporting and tracking bugs in an Agile/Kanban workflow. Computer Technology graduate with a technical support background. Plans, directs, and tests personal projects built with AI-assisted development, and tracks defects and enhancements with GitHub Issues. Eager to grow into API testing and test automation.

Experience

IT and Administrative Support Intern

July 2025 - July 2026 | 1,800 hours

Avega Bros. Integrated Shipping Corp.

- Performed QA on updates to BITS, the company's production biometric attendance system, by writing and executing test cases, running manual tests before each release, and reporting and tracking bugs.
- Tested features including overtime check-in handling, multi-shift/split-shift corrections, punch-time normalization, batch overtime assignment, and split-shift report aggregation.
- Used Agile practices with a GitHub Kanban board to track sprint tasks and move work through To Do, In Progress, Testing, and Done stages.
- Supported the real-time attendance dashboard and system data handling.
- Provided technical and administrative support, including troubleshooting, hardware and software installation, data entry, inventory records, and document organization.

Selected Projects

ArcaneTyper — Multiplayer Typing Game (AI-ASSISTED BUILD)

arcane-typer.vercel.app (<https://arcane-typer.vercel.app>)

- Wrote requirements and directed the AI-assisted build of a web typing game with survival, practice, and real-time duel modes, plus leaderboards, achievements, and user accounts.
- Manually tested game modes, scoring, and real-time duel flows, and tracked bugs and enhancements using GitHub Issues.

Mimic — Android Party Game with Private Encrypted Vault (AI-ASSISTED

BUILD)

github.com/lbemCabahug/mimic (<https://github.com/lbemCabahug/mimic>).

- Planned requirements and directed the AI-assisted build of an Android social-deduction game (3 game modes, 5 word packs, LAN multiplayer for up to 8 players) that conceals a private encrypted photo, video, and notes vault.
- Manually tested game and vault security flows (secret-gesture unlock, PIN setup, failed-PIN lockout, auto-lock, encrypted video playback).
- Found and reported release-only bugs, including a vault setup failure that appeared only on clean installs, and adopted a rule to test every release build on a wiped physical device.
- Verified features against an automated suite of 450+ tests plus manual checks on a physical release-mode device before marking work done.

Skills

QA & Testing: Manual, functional and regression testing; test case writing and execution; bug reporting and tracking; pre-release testing on wiped physical devices.

Tools & Workflow: Git, GitHub, VS Code, Antigravity IDE, GitHub Issues & Kanban Boards, Agile/Kanban, requirements planning, debugging

Web: TypeScript, JavaScript, SQL, HTML, CSS, React, Next.js, Astro, Express.js, Tailwind CSS

Data: PostgreSQL

Mobile: Android (manual testing of gameplay, security and vault flows on release builds)

Support & Records: Technical support, Data entry and records

Education

Bachelor of Industrial Technology, Major in Computer Technology

Cebu Technological University - Danao Campus

August 2022 - May 2026

- Academic Distinction Awardee
- Dean's Lister

Training

Creative Web Design

TESDA — 102 hours

Languages

- **Cebuano** — Native
- **Filipino** — Fluent
- **English** — Professional working proficiency
